

Herne Bay Tide Gauge

Location

OS: 616895E 169377N

WGS84: *Latitude:* 51° 22.919196' N *Longitude:* 01° 6.9335907' E

Instrument

Etrometa Step Gauge

Benchmarks

Benchmark

TGBM = 5.524 m above Ordnance Datum Newlyn

616894.912E 169376.689N

Description

Steel pin

TGZ = -3.510 m above Ordnance Datum Newlyn

TGZ = -0.790 m above Chart Datum

TGZ = 9.034 m below TGBM

Datum

All data are to Ordnance Datum Newlyn. The height of Chart Datum relative to Ordnance Datum at Herne Bay is -2.72m (Admiralty Tide Tables, Supplementary Table III).

Survey information

The site was last surveyed on 26 November 2004. All data prior to this date were re-adjusted to the new level.

Site characteristics

The old pier head is now detached from the shore. Some wave reflection from the dolphin legs can occur. The frontage is along the outer Thames estuary. Spring tidal range is 4.9m.

Data quality

Recovery rate (%)	Sample interval
95	10 minutes

Service history

The step gauge became operational on 24 April 1996, and is serviced at 9-monthly intervals. No re-calibration of the gauge is necessary.

Measurements

Prior to 01 May 2008, the step gauge measuring burst was 10 minutes at 2.56Hz, every 10 minutes, with the time stamp for the 10 minute average at the centre of the burst. From 00:00Z 01 May 2008, the measuring burst is 1 minute at 2.56 Hz, every 10 minutes, time stamped at the start of the burst.

Residuals and Elevations (OD and CD) for the whole year are shown in Figures 1 to 3 respectively.

MHWN	1.45	4.17
MSL	0.15	2.87
MLWN	-1.16	1.57
MLWS	-2.19	0.53
LAT	-2.72	-0.00

General

The time series of 10 minute tidal elevations for one year is quality-checked in accordance with ESEAS guidelines, flagged and archived. The archived time series is continuous and monotonic, with missing data given as 9999. The missing data shown are days where the entire 24 hours of data are missing.

Monthly **extreme maxima/minima** are the maximum and minimum water levels from all measured data for that month. Monthly **surge maxima/minima** (residuals) are calculated in a similar manner from the time series of residuals. Residuals are derived as the measured tidal elevation minus the predicted tidal elevation.

The monthly Mean Level is calculated as the average of all readings for the given month. The annual Z_0 is the value of Mean Sea Level derived by the harmonic analysis of the year's data. These values should not be used for any purpose without consideration of the recovery rate.
