

Figure 1: Management Unit 8B (Pegwell Bay)

 *Blue: Recycling Extraction Point*
Red: Recycling Deposition Area

The chalk cliffs in the east of this Management Unit give way to a small section of geologically important sandstone cliffs, and then to low-lying land in the west which has no primary defences. Fronting the low-lying agricultural land are tidal flats, which extend north of the River Stour and are of international nature conservation value.

No recycling works have been undertaken within this management unit since 2003 as there has been no need. The management policy is divided for this unit, following the guidance of continuing to maintain the defences where there is an economic justification (Isle of Grain to South Foreland SMP, 2007). However, where there currently are no defences in place a policy of 'No Active Intervention' is recommended.

Survey Regime

Survey type	Frequency	Profile spacing/survey extent
Topographic baseline	Never	-
Topographic interim profile	None	-
Bathymetry	5 years	50m profiles to 1km offshore
Ortho-photography	5 years	MLW
Aerial photography	Annual	MLW
Lidar	Rolling Programme	MLW
Habitat Mapping	5 Years	As Required

Full details of data availability and extents can be found on the Channel Coast Observatory Website (www.channelcoast.org)

Summary of Beach Operations

Date	Operation	Quantity (m ³)	Location/Notes
No beach material has been recycled since 2003			

Full details of beach operations can be obtained from Canterbury City Council (strategic.monitoring@canterbury.gov.uk)
