

Figure 1: Management Unit 9C (St Margaret's at Cliffe)

 Blue: Recycling Extraction Point
 Red: Recycling Deposition Area

This unit covers the section of coast which contains the cliff-top village of St Margaret's Bay as well as some development on the undercliff platform at the base of the cliffs. The frontage has a history of defence and currently there are a number of management practices in place. A mixed shingle beach comprising several timber groynes and a seawall act as protection to the cliff toe.

The long-term plan for St Margaret's is to continue to protect the assets through defending the present position.

No coastal works have been necessary to date.

Survey Regime

Survey type	Frequency	Profile spacing/survey extent
Topographic baseline	1 per Phase	50m to MLWS
Topographic interim profile	Spring and Autumn	150m to MLWS
Bathymetry	5 years	50m profiles to 1km offshore
Ortho-photography	5 years	MLW
Aerial photography	Ceased in 2008	MLW
Lidar	Rolling Programme	MLW
Habitat Mapping	5 Years	As Required

Full details of data availability and extents can be found on the Channel Coast Observatory Website (www.channelcoast.org)

Summary of Beach Operations

Date	Operation	Quantity (m ³)	Location/Notes
No beach material has been recycled since 2003			

Full details of beach operations can be obtained from Canterbury City Council (strategic.monitoring@canterbury.gov.uk)
